## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **LISTING OF CLAIMS:**

- 1. (Original) A method for simultaneous and fractional determination of peracetic acid and hydrogen peroxide, which comprises adding a solution containing peracetic acid and hydrogen peroxide to a pH buffer solution with pH from 5 to 6 containing a molybdate, iodine and an iodide ion, and measuring redox potential changes in a reaction of peracetic acid with the iodide ion and a reaction of hydrogen peroxide with the iodide ion.
- 2. (Original) The method for simultaneous and fractional determination of peracetic acid and hydrogen peroxide according to claim 1, wherein the concentration of the molybdate is from 0.5 to 1 mmol/l, the concentration of iodine is from 0.3 to 2 mmol/l, the concentration of the iodide ion is from 5 to 20 mmol/l, and the redox potential changes are measured using a potentiometer having a working electrode made of platinum, gold or carbon.
- 3. (Currently Amended) The method for simultaneous and fractional determination of peracetic acid and hydrogen peroxide according to claim [[1 or]] 2, wherein a measuring solution containing known concentrations of an iodide ion and iodine is used which is prepared by adding an aqueous solution of known concentration(s) of peracetic acid and/or hydrogen peroxide to a pH buffer solution

containing potassium iodide in a measuring container to allow a reaction with potassium iodide.

- 4. (Currently Amended) The method for simultaneous and fractional determination of peracetic acid and hydrogen peroxide according to claim [[1 or]] 2, wherein a pH buffer solution containing a molybdate, iodine and an iodide ion is used which is obtained by adding a pH buffer solution containing potassium iodide to a measuring container to cause potentiostatic electrolysis and thereby generate iodine and then adding the molybdate.
- 5. (New) The method for simultaneous and fractional determination of peracetic acid and hydrogen peroxide according to claim 1, wherein a measuring solution containing known concentrations of an iodide ion and iodine is used which is prepared by adding an aqueous solution of known concentration(s) of peracetic acid and/or hydrogen peroxide to a pH buffer solution containing potassium iodide in a measuring container to allow a reaction with potassium iodide.
- 6. (New) The method for simultaneous and fractional determination of peracetic acid and hydrogen peroxide according to claim 1, wherein a pH buffer solution containing a molybdate, iodine and an iodide ion is used which is obtained by adding a pH buffer solution containing potassium iodide to a measuring container to cause potentiostatic electrolysis and thereby generate iodine and then adding the molybdate.
